

C2PA + CAWG

An exploration of how FPP can serve the content provenance ecosystem

Eric Scouten · Principal Scientist and Identity Architect, CAI · Adobe

First Person Project Partner Workshop · 27 January 2026

Restoring trust and transparency in the age of AI

The problem, in a nutshell

On the Internet ...

digital media content

can travel from a content creator

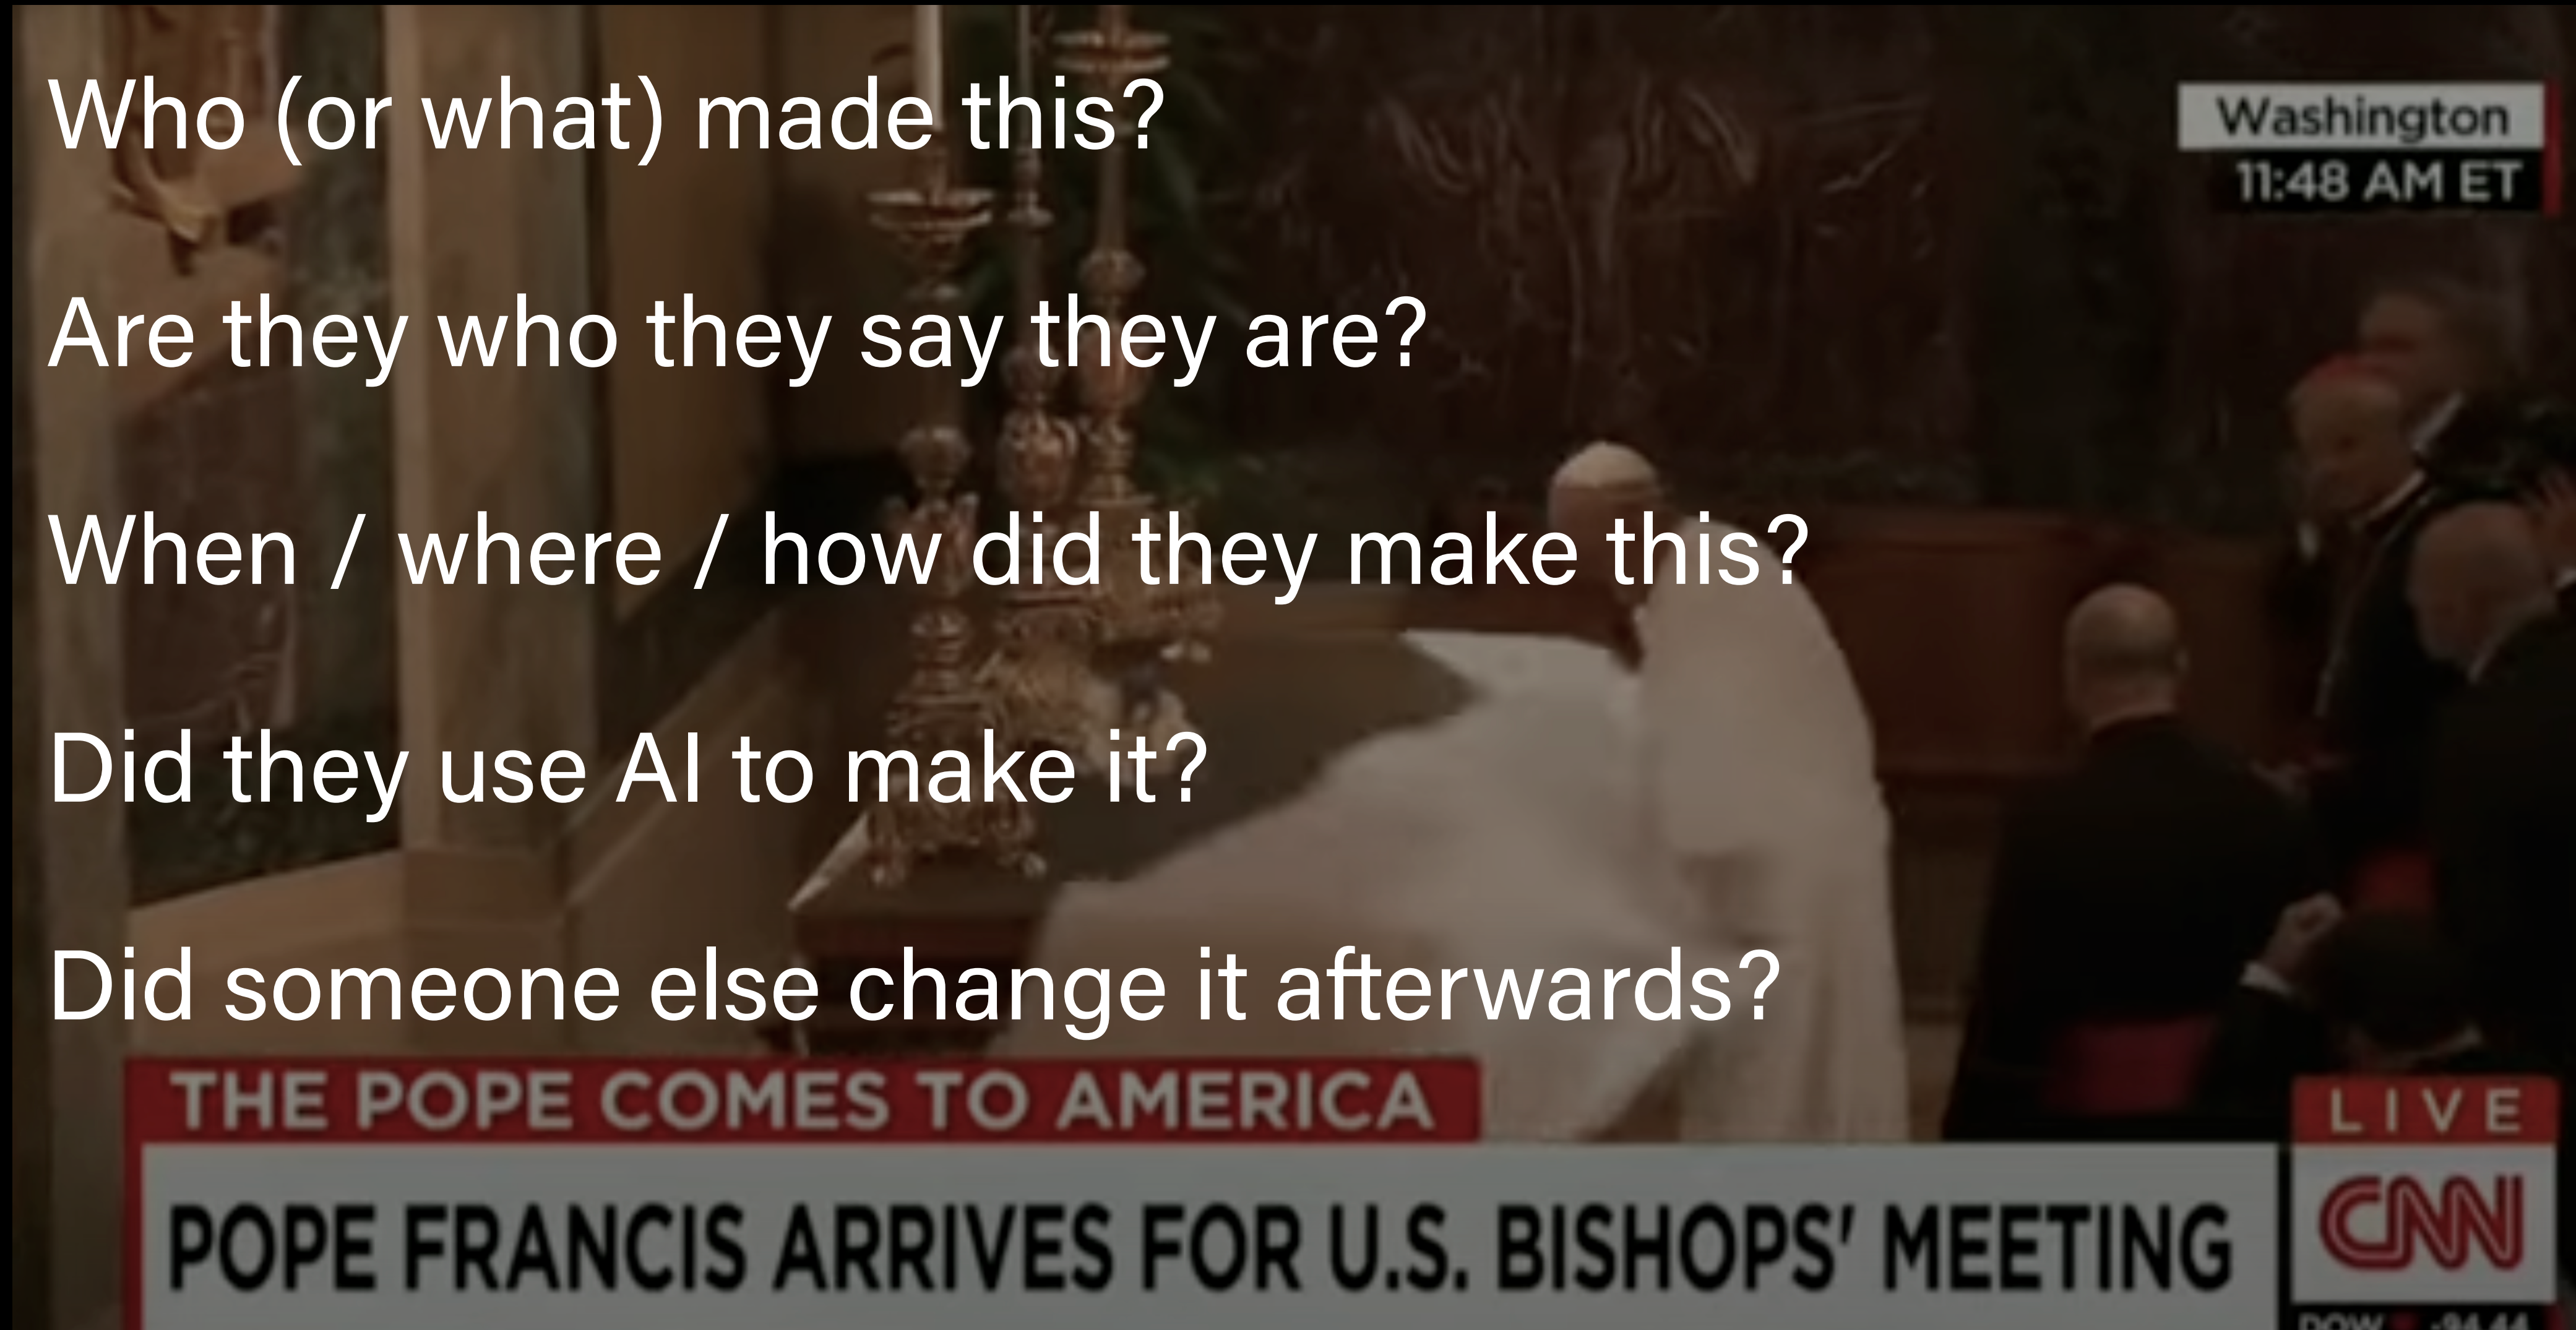

to unforeseen recipients

via unknown channels.

You might ask yourself ...

- Who (or what) made this?
- Are they who they say they are?
- When / where / how did they make this?
- Did they use AI to make it?
- Did someone else change it afterwards?

A tamper-evident digital “nutrition label”

We provide tools for digital **content creators** ...

- Hardware and software **tool vendors** – and
- Individual and organizational **content creators**

... to describe and sign their work.

The three Cs ... who does what here?

What and how
C2PA

Coalition for Content
Provenance and Authenticity

c2pa.org

Who
CAWG

Creator Assertions Working
Group (*part of DIF*)

cawg.io

Advocacy and education
contentauthenticity.org

Who is taking accountability?

C2PA claim generator

Hardware or software tool
involved in creating the
content.

CAWG named actor

Individual or organization
involved in creating the
content.

What are they taking responsibility for?

C2PA claim generator
can describe ...

- GPS data / time of capture (if known to hardware)
- Edit actions taken / AI used
- Ingredients incorporated into content

CAWG named actor
can describe ...

- Individuals or organizations involved in *creating* content
- Events or locations *depicted* in content
- Metadata / context for content

Two responsible parties, two signatures

C2PA claim generator

- X.509 certificate / COSE signature
- **NEW (July 2025):** Certificates have C2PA-specific key usage, not interoperable with other purposes
- Issued to hardware or software that demonstrates compliance with C2PA rules

CAWG named actor

- **Flexible framework** for using multiple kinds of digital credentials
- Intended to bind credential to content
- Optional – for those that wish to identify themselves as content creator

C2PA data model

C2PA data model

Overview

An **asset** is any piece of digital media that we wish to describe.

Currently, we support still images, motion pictures, recorded audio, documents (PDF), fonts, and more.

An asset is described by a **C2PA Manifest**.

C2PA data model

Overview

A C2PA Manifest can refer to any number of *ingredient manifests* when earlier content is incorporated and composed into a new asset.

C2PA data model

Assertions

Assertions are opt-in statements that cover areas such as:

- hard binding to asset's binary content
- capture device details
- edit actions
- thumbnail of the content
- other content (ingredients) that were incorporated into this content

This mechanism is **extensible**.

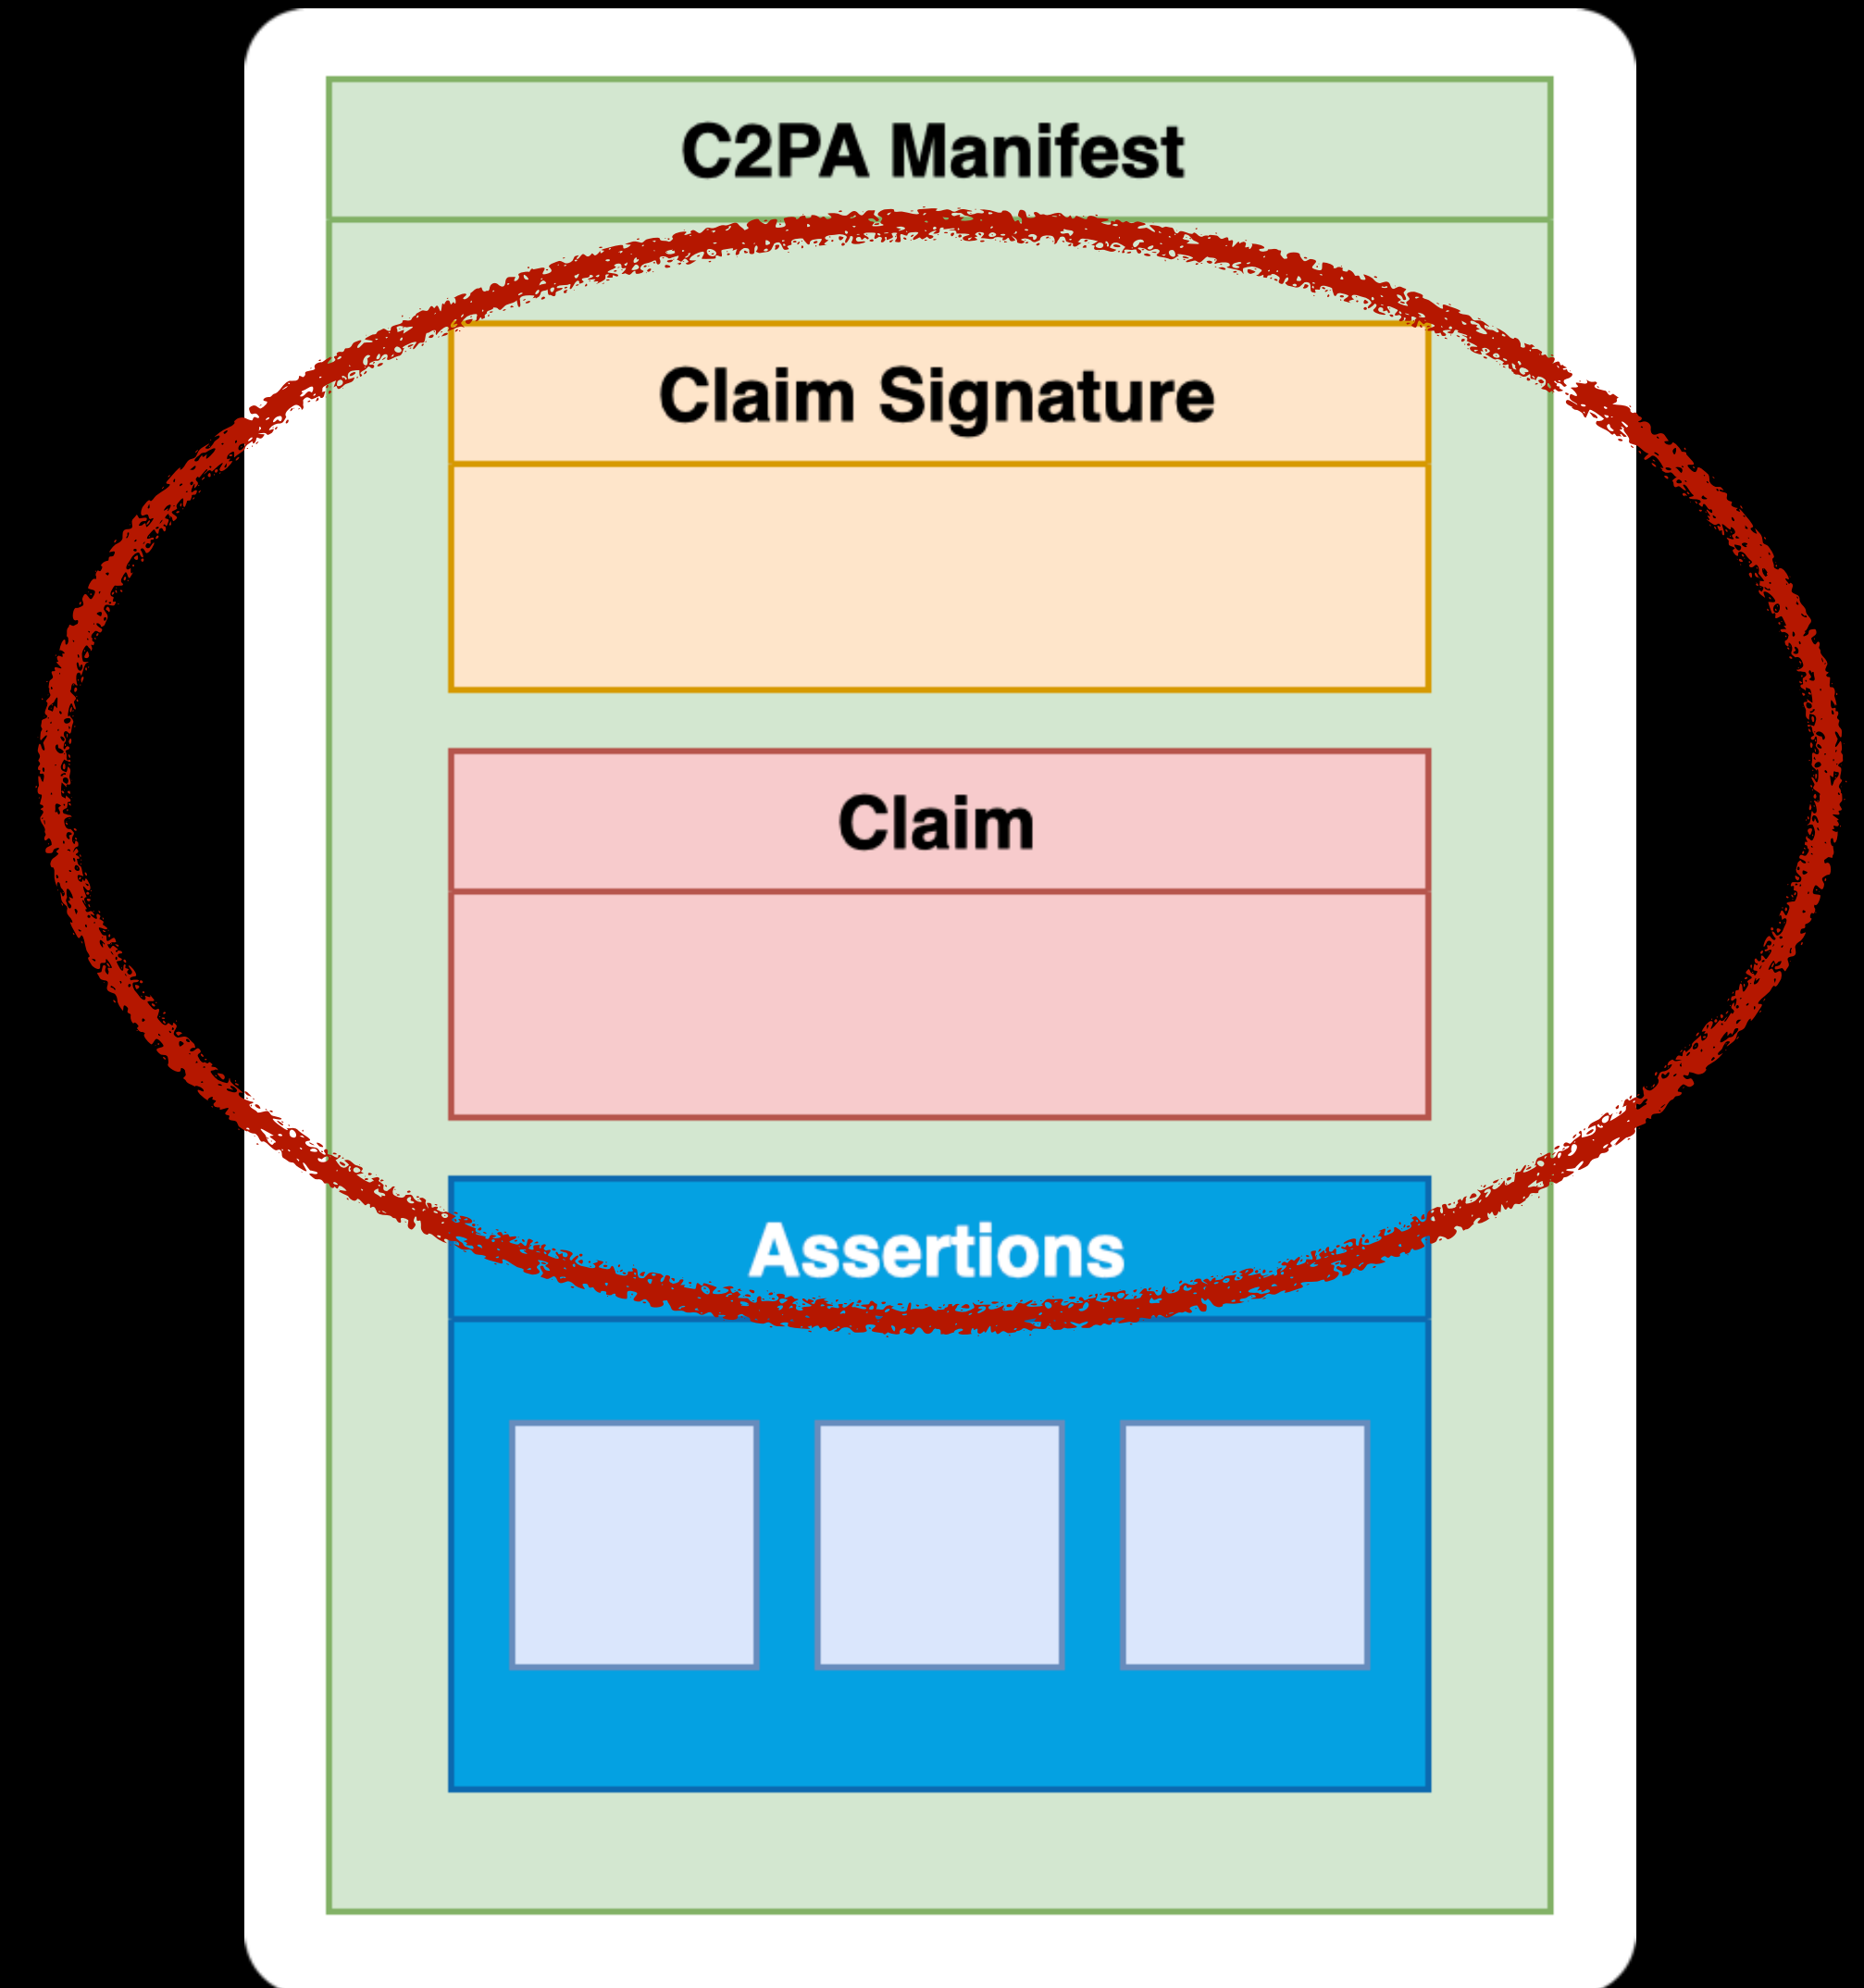

C2PA data model

Claim

Every C2PA Manifest has exactly one **claim**, which lists the assertions and describes the claim generator (tool that built the Manifest).

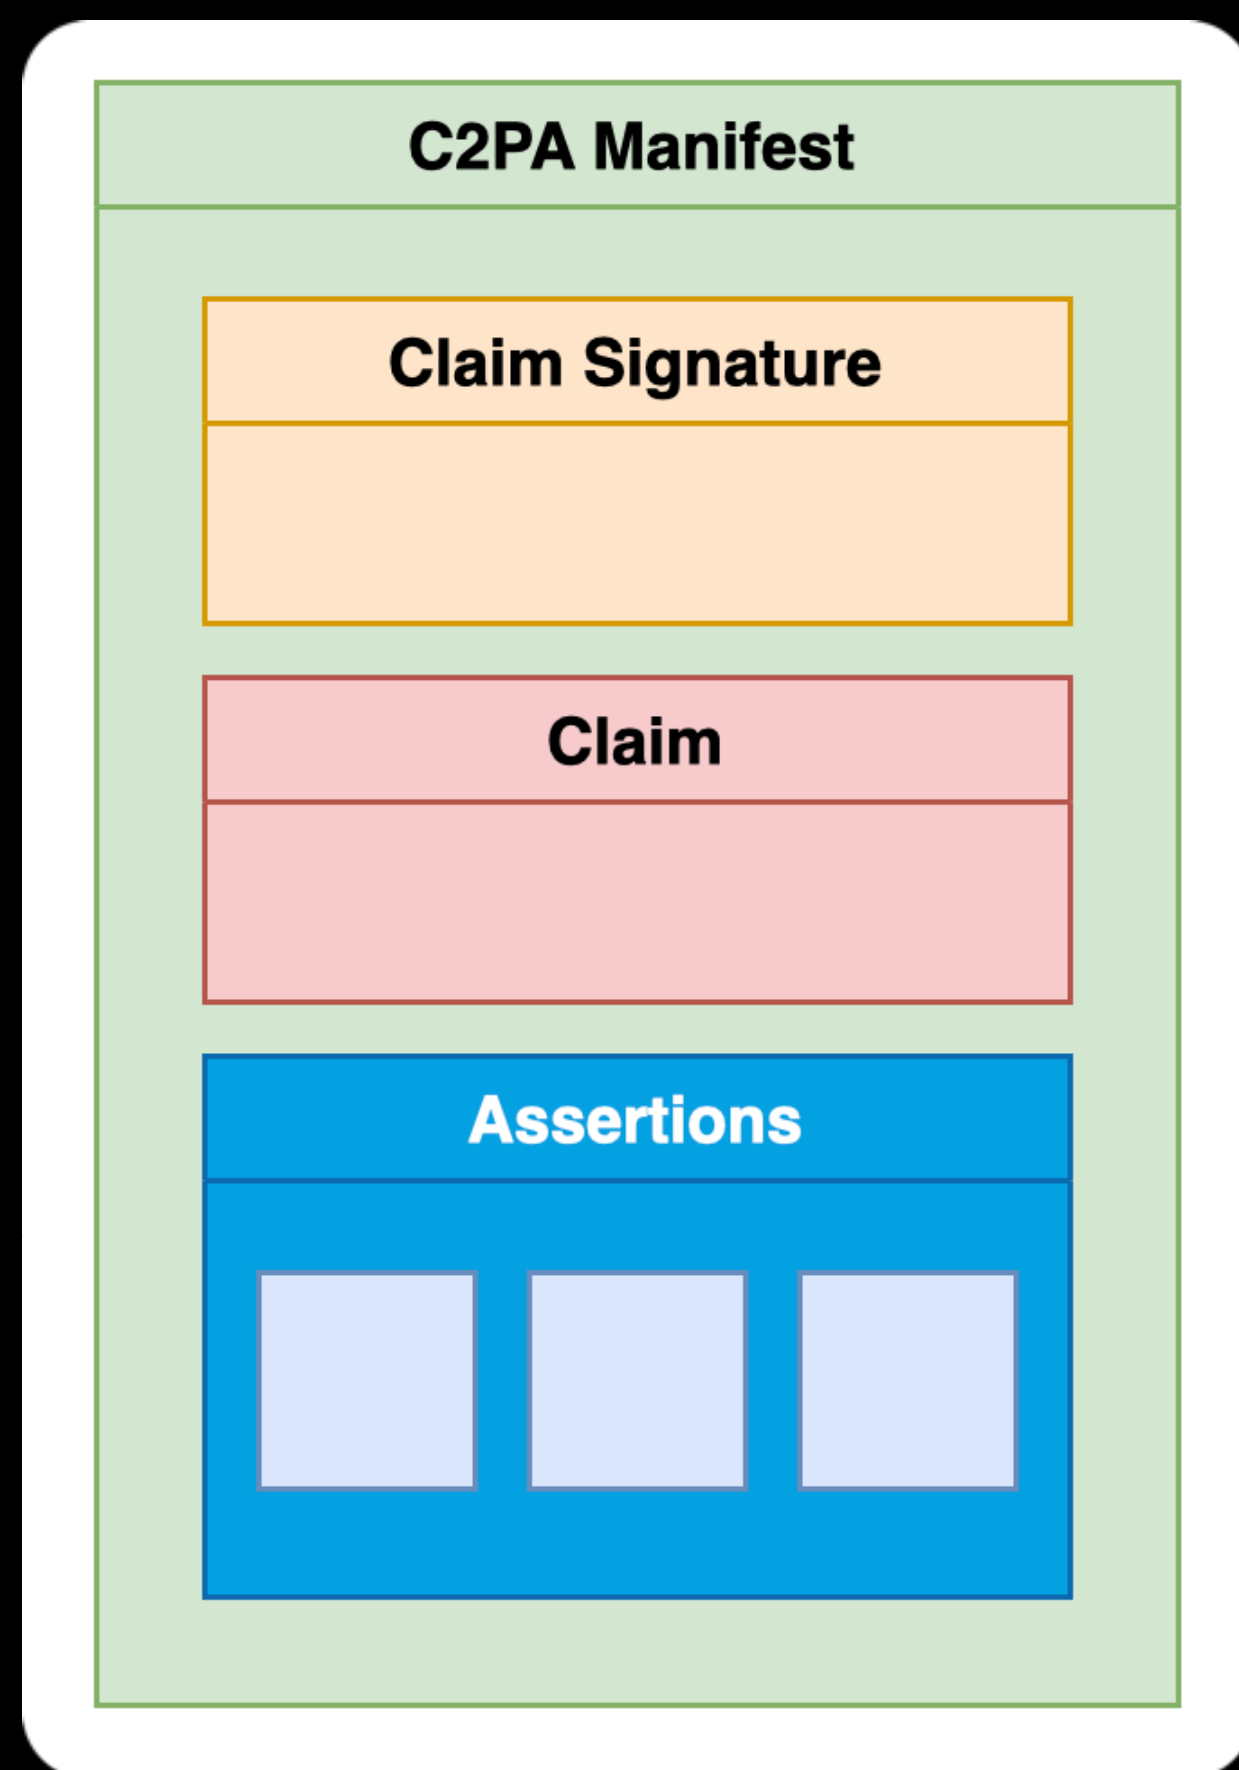

This claim is signed using an X.509 certificate, which provides evidence of the tool used and provides tamper evidence if a third party attempts to change the claim after the fact.

C2PA data model

Introducing CAWG

CAWG (Creator Assertions Working Group)

was created in early 2024 to create technical standards to house metadata sourced from individual and organizational content creators.

CAWG became a working group within DIF in March 2025.

Decentralized
Identity
Foundation

What does CAWG do?

Four assertion standards, building on C2PA technical spec:

- **Endorsement** ► Forward permission for CDN-style renditions on C2PA assets
- **Identity** ► Binding digital identity credentials to C2PA assets
- **Metadata** ► Associate user-generated metadata with C2PA assets
- **Training and Data Mining** ► Express permissions regarding AI training and data mining usage

What does CAWG do?

Four assertion standards, building on C2PA technical spec:

      },
      {
        "url": "self#jumbf=c2pa/urn:uuid:F9168C5E-CEB2-4faa-B6BF-329BF39FA1E4/c2p",
        "hash": b64'Yzag4o5j04x...'
      }
    ],
    "role": ["cawg.creator"],
  },
  "signature": b64'....', // COSE signature
  "pad1": b64'....', // zero-filled pad buffer
  "pad2": b64'....' // zero-filled pad buffer
}
```

role (optional)

How did the credential
subject participate?

Identity assertion

What is a verifiable identifier?

verifiable identifier

(credential)

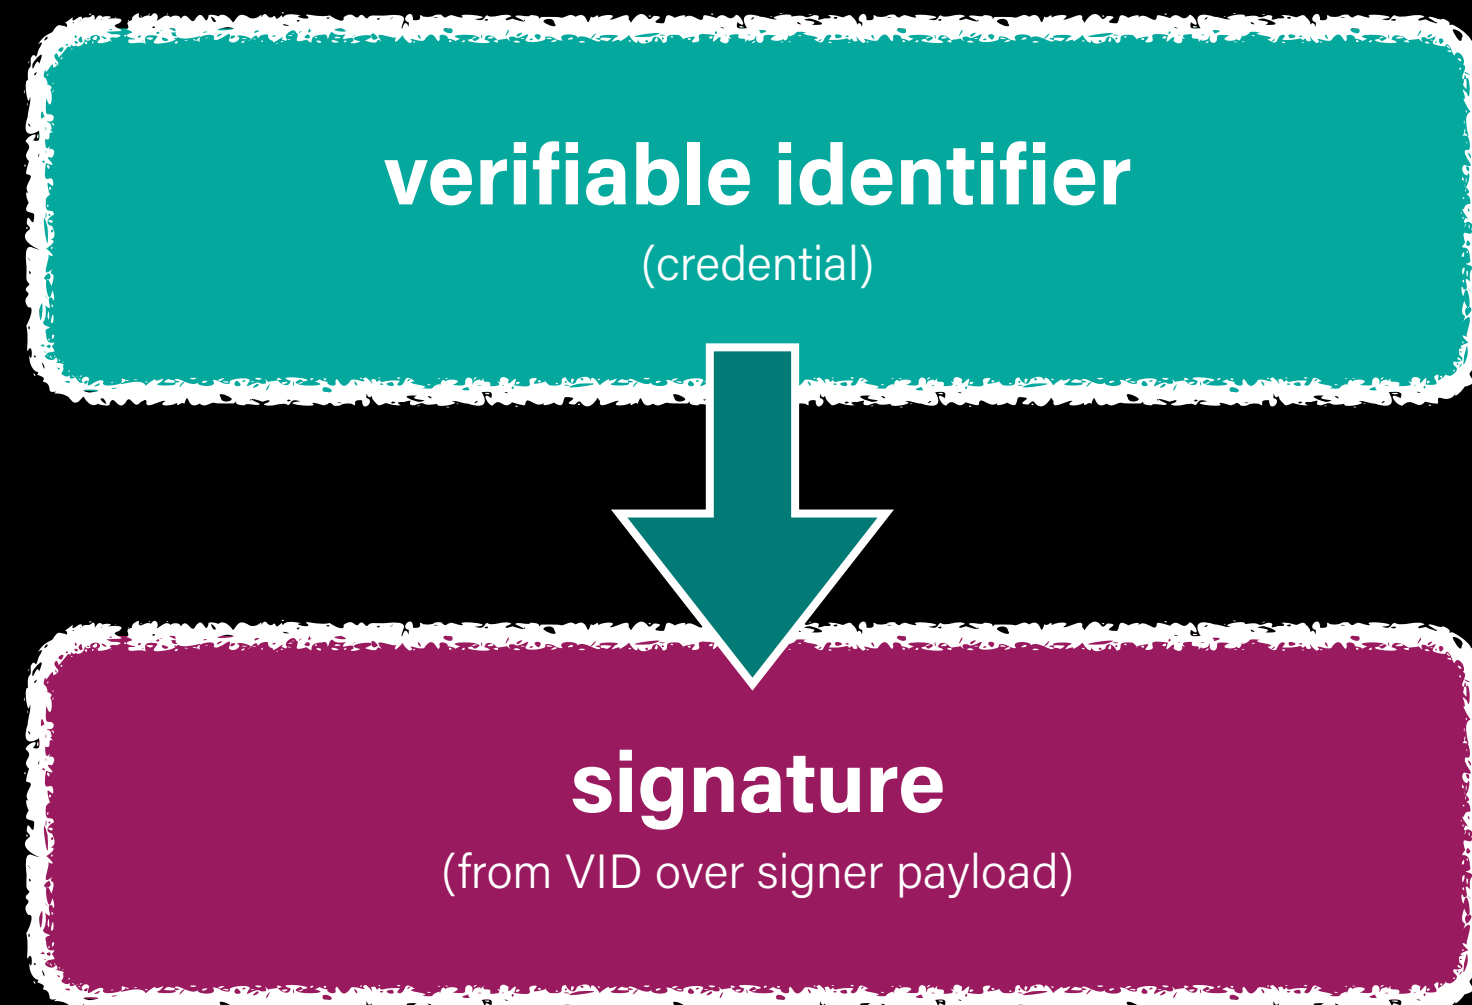

Any credential for which an **independent system** is able to associate, discover, and verify the **cryptographic keys** associated with that credential.

Identity assertion

Signing workflow

Identity assertion (CBOR)

```
{
  "signer_payload": {
    "sig_type": "cawg.x509.cose",
    "referenced_assertions": [
      {
        "url": "self#jumbf=c2pa/urn:uuid:F9168C5E-CEB2-4faa-B6BF-329BF39FA1E4/c2p",
        "hash": b64'U9Gyz05tmpftkoEYP6XYNsMnUbnS/KcktAg2vv7n1n8='
      },
      {
        "url": "self#jumbf=c2pa/urn:uuid:F9168C5E-CEB2-4faa-B6BF-329BF39FA1E4/c2p",
        "hash": b64'G5hfJwYeWT1flx0bm5020-4faa-B6BF-329BF39FA1E4/c2p
      },
      {
        "url": "self#jumbf=c2pa/urn:uuid:F9168C5E-CEB2-4faa-B6BF-329BF39FA1E4/c2p",
        "hash": b64'Yzag4...'
      }
    ],
    "role": ["cawg.creator"]
  },
  "signature": b64'....',
  "pad1": b64'....', // zero-filled pad buffer
  "pad2": b64'....' // zero-filled pad buffer
}
```

signature

Proves association of
credential subject to
content.

Identity assertion

What kinds of credentials can be used?

verifiable identifier
(credential)

In principle, **any credential** that meets the
ToIP definition of **verifiable identifier** *could*
be used ...

provided ... someone describes how to do so.

Identity assertion

What we've done so far (1 of 2 – for institutional content creators)

verifiable identifier

(credential)

X.509 certificate (S/MIME and IPTC)

signature

(from VID over signer payload)

COSE signature

Identity assertion

What we've done do far (2 of 2 – for individual content creators)

verifiable identifier

(credential)

.....➔ **Ummm ...**

signature

(from VID over signer payload)

.....➔ **?**

Identity assertion

What we've done so far (2 of 2 – for individual content creators)

Problem: Individual content creators don't think of their identities in the way that we in the identity world do.

verifiable identifier

(credential)

- Instagram
- Twitter
- Other social media
- Web site
- Identity document
(mDL or physical drivers license, etc.)

signature

(from VID over signer payload)

Identity assertion

What we've done so far (2 of 2 – for individual content creators)

Solution: Describe how a platform vendor can *aggregate* these identity signals and attest to them on behalf of their customer.

verifiable identifier

(credential)

Collection of gathered federated IDs

signature

(from VID over signer payload)

W3C verifiable credential*
signed by identity claims aggregator

(from VID over signer payload)

**Are you even
decentralized?**

Not so much.

How I used to end this presentation ...

Connect the dots

Who's next?

My challenge to you:

Introduce me to content creators who have access to autonomous signing credentials and know how to use them.

Come help us bind content provenance with identity!

CAWG is part of  **DIF**

Meetings are every other Monday at 0800 Pacific / 1100 Eastern / 1600 UTC.

Trust Over IP members are automatically welcomed via a joint participation agreement with DIF.

Next meeting: 9 February
